

APRIL 2024

Catastrophic Stop Update

The NDR Catastrophic Stop Sell model combines time-tested, objective indicators designed to identify high risk periods for the equity market. The model (chart right) improved during the month and entered April with a fully invested equity allocation recommendation.

The bullish reading from the model is driven by strong internals. Five of the seven price-based measures—including relative strength, trend, and breadth—remain bullish. External measures such as option-adjusted spreads, global trade, and high-yield and emerging market breadth remained bullish. Short-term sentiment—as measured by the NDR Daily Trading Sentiment Composite—moved back to neutral during the month (chart left). For now, the weight-of-the-evidence recommends a fully invested allocation to equities according to the model.

U.S. Market Update

The S&P 500 Total Return Index continued its positive momentum into March with a gain of about 3.2%. Breadth remains bullish—10 of the 11 S&P 500 sectors posted positive price gains for the month. Energy was the standout with a double-digit gain, while Consumer Discretionary was basically flat.

The U.S. economy has been experiencing strong growth and low inflation, a goldilocks environment that has historically been the most bullish scenario for the S&P 500 (chart below). The

environment favors large-caps over small-caps and Growth over Value. With the S&P 500 Total Return Index up 10.6% in Q1, the market has priced in this scenario.

The Fed is openly trying to engineer a soft landing, which could put the economy in the slow growth/low inflation scenario. If they ease too much, Fed officials risk overheating the economy, but if they stay too tight, they could trigger a recession like in 2001 and 2007. For the S&P 500, a downshift to slower growth but still low inflation (a soft landing in Fed-speak) has

historically coincided with slightly above-average returns. Gains have been smaller in an overheating scenario, with growth and inflation above trend. Stagflation, or high inflation and low growth, has been the worst backdrop for stocks.

The sector model recommended mixed leadership this month. Entering April, Financials, Information Technology, Consumer Discretionary, and Utilities are overweight. Real Estate, Communication Services, Energy, Materials, Industrials, and Consumer Staples are underweight.

Financials' allocation remained at overweight. On a fundamental basis, a strengthening U.S. Dollar Index (chart right) joined bullish readings from economic surprises, business credit conditions, and Financials' investment grade option-adjusted spreads. However, bank loan growth and the 10-2 yield curve remained bearish. Technicals are confirming with four of the six measures on bullish signals including sector momentum, trend, volatility, and relative drawdown.

The Information Technology sector's allocation remained at overweight. On a fundamental basis, indicators deteriorated—valuation and inflation expectations moved bearish during the month (chart left), joining relative short interest. While the majority of internal measures remain bullish, the 50-day net new highs indicator continued its bearish reading.

Communication Services' allocation remained at a significant underweight. On a fundamental basis, the 10-2 yield curve and sales growth trends remained bullish. However, earnings revision breadth (chart right), relative valuation, option-adjusted spreads, and internet vs. retail sales trends remain bearish. Technicals remained weak—four of the six measures are bearish for the sector.

The Real Estate sector's allocation remained at underweight. On a fundamental basis, indicators improved slightly—the MBA Purchase Index joined the Homebuilders price index, business credit conditions, and economic surprises at a bullish reading during the month. However, unemployment, the 30-year yield, and industrial production of construction supplies remain headwinds for the sector. Furthermore, technicals weakened—all five measures are now negative for the sector—a short-term relative price mean

reversion indicator moved bearish during the month (chart left).

Summary

The message from the sector model was a bit more mixed this month. Entering April, Financials, Technology, and Health Care are overweight. Real Estate, Communication Services, Materials, and Consumer Staples are underweight. The sector model uses sector-specific indicators to determine opportunities and identify risks in an objective, weight-of-the-evidence approach.

Strategy description

- The Smart Sector® with Catastrophic Stop strategy combines two Ned Davis Research quantitative investment strategies: The NDR Sector Allocation and the NDR Catastrophic Stop.

The process is based on the weight of the evidence

- The fund begins by overweighting and underweighting the S&P 500 sectors based on Ned Davis Research's proprietary sector models.
- Each of the sector models utilize sector-specific, weight-of-the-evidence composites of fundamental, economic, technical, and behavioral indicators to determine each sector's probability of outperforming the S&P 500.
- Sectors are weighted accordingly relative to benchmark weightings.

When market risks become extraordinarily high — reduce your portfolio risk

- When risks are elevated, the NDR Catastrophic Stop Sell (CSS) model raises cash by up to 50% from the equity positions.
- The NDR CSS model combines time-tested, objective indicators designed to identify periods of high risk for the broad U.S. equity market. The model uses price-based, breadth, deviation from trend, fundamental, economic, interest rate, behavioral and volatility-based indicator composites.

When market risks return to normal — put your money back to work

- When risks are reduced, the strategy moves toward a fully allocated position, according to the NDR CSS model.

The Smart Sector® Strategy is not intended to be the primary basis for investment decisions and the usage of the model does not address the suitability of any particular investment for any particular investor.

Using any graph, chart, formula, model, or other device to assist in deciding which securities to trade or when to trade them presents many difficulties and their effectiveness has significant limitations, including that prior patterns may not repeat themselves continuously or on any particular occasion. In addition, market participants using such devices can impact the market in a way that changes the effectiveness of such devices. NDR believes no individual graph, chart, formula, model, or other device should be used as the sole basis for any investment decision and suggests that all market participants consider differing viewpoints and use a weight of the evidence approach that fits their investment needs.

DISCLOSURES

Past performance does not guarantee future results. No current or prospective client should assume future performance of any specific investment or strategy will be profitable or equal to past performance levels. All investment strategies have the potential for profit or loss. Changes in investment strategies, contributions or withdrawals and economic conditions may materially alter the performance of your portfolio. Different types of investments involve varying degrees of risk, and there can be no assurance that any specific investment or strategy will be suitable or profitable for a client's portfolio. Historical performance results for investment indexes and/or categories generally do not reflect the deduction of transaction and/or custodial charges or the deduction of an investment management fee, the incurrence of which would have the effect of decreasing historical performance results. There can be no assurances that a portfolio will match or outperform any particular benchmark.

There may be a potential tax implication with a rebalancing strategy. Re-balancing involves selling some positions and buying others, and this activity results in realized gains and losses for the positions that are sold. The performance calculations do not reflect the impact that paying taxes would have, and for taxable accounts, any taxable gains would reduce the performance on an after-tax basis. This reduction could be material to the overall performance of an actual trading account. NDR does not provide legal, tax or accounting advice. Please consult your tax advisor in connection with this material, before implementing such a strategy, and prior to any withdrawals that you make from your portfolio.
